Appendix
to the order of the
Minister of health of the
Republic of Kazakhstan
dated December 20, 2020
№ ҚР ДСМ-289/2020

Rules for admission of children to preschool organizations who have not received routine preventive vaccinations, and the threshold level of community immunity

Chapter 1. General provisions

1. These rules for admission of children to preschool organizations who have not received routine preventive vaccinations, and the threshold level of community immunity (hereinafter - the Rules) are developed in accordance with paragraph 11 of Article 85 of the Code of the Republic of Kazakhstan dated July 7, 2020 "On people's health and health care system" (hereinafter referred to as the Code) and determine the procedure for admission of children to preschool organizations who have not received routine preventive vaccinations, and the threshold level of community immunity.

2. These Rules apply to preschool organizations regardless of types, forms of ownership, departmental subordination, mode of operation and time of stay (with full, part-time, round-the-clock stay).

3. The following concepts are used in these Rules:

1) coverage of routine preventive vaccinations - the percentage of children in a certain population (group of children) who received mandatory preventive vaccinations in the manner, the timing of their implementation, determined in accordance with Article 85 of the Code. Vaccination coverage required to achieve community immunity reflects the number of children acquiring sufficient immunity to neutralize the pathogen;

2) preschool organization - an educational organization that implements general education , special educational programs for preschool education and training;

3) preventive vaccinations – injection into the body of children of immunobiological drugs for immunoprophylaxis in order to create specific immunity to infectious diseases;

4) community immunity - indirect protection of unvaccinated children by reaching a threshold level of coverage with routine preventive vaccinations of the population against infections preventable by vaccines;

5) the threshold level of coverage with routine preventive vaccinations to achieve community immunity (hereinafter referred to as the threshold level) - the proportion of children of a certain population (group of children) who have personal immunity to this infection (as a result of individual vaccination or who have survived an infection), at which the epidemiological effect of resistance to the spread of infection in this population (group of children) is achieved.

Chapter 2. Procedure for admission of children to preschool organizations who have not received routine preventive vaccinations, and the threshold level of community immunity

4. Admission of children to preschool organizations who have not received scheduled preventive vaccinations due to the presence of permanent medical contraindications or other reasons is carried out taking into account the achievement of the threshold level of community immunity in groups, classes (except for groups of correctional type).

5. Mandatory prophylactic vaccinations are carried out within the guaranteed volume of medical care in the manner, terms, for population groups subject to prophylactic vaccinations, determined by the Government of the Republic of Kazakhstan in accordance with paragraph 5 of Article 85 of the Code.

6. Registration of preventive vaccinations is carried out by appropriate entries in the accounting documentation approved by the authorized body in the field of healthcare in accordance with subparagraph 31) of Article 7 of the Code, which is stored at the facilities at the place of vaccination.

7. When forming groups in preschool organizations, a number of children who have not received routine preventive vaccinations (due to the presence of constant medical contraindications to preventive vaccinations and others) is allowed which ensures the achievement of the threshold level of community immunity.

8. The threshold level of coverage of children with routine preventive vaccinations to achieve community immunity in groups of preschool organizations is observed at the level of at least 90% of the total number of children in the group. Admission of children to preschool organizations who have not received the routine preventive vaccinations is carried out only when their share in groups is no more than 10%.

9. When forming groups of preschool organizations, taking into account the threshold level of coverage with routine preventive vaccinations in order to achieve community immunity, the number of children who received and did not receive vaccinations is taken into account.

10. Medical workers of preschool organizations, when forming groups and classes, carry out the initial calculation (assessment) of the coverage of routine preventive vaccinations of children with further recalculation (re-assessment) taking into account the movement of children in each group, class and registration of the calculation (assessment) results in the register log of coverage of children with routine preventive vaccinations in accordance with the appendix to these Rules.

11. Leadership and medical workers of preschool organizations ensure constant compliance with the coverage of routine preventive vaccinations to achieve community immunity among children of at least 90%.
